

Full Stack Web Development

Exercise

Exercise – Create Portfolio Website

Create your own portfolio website using HTML + CSS, and deploy to github page. Your repositories should only contain index.html , styles.css , and assets folder to keep an image.

You can find out layout reference from:

1. <https://nicepage.com/k/profile-website-templates>
2. https://www.behance.net/search/projects?search=profile%20website%20portfolio&tracking_source=typeahead_search_suggestion

Deploy to Github Page

1. Create a new repository on your github
2. Push your project into the github repository that you already created before
3. Under your repository name, click Settings.
4. In the "Code and automation" section of the sidebar, click Pages.
5. On the "Build and deployment" section, go to branch and select the branch that will be deploy and then click save.
6. Your repositories would be deployed on
`https://<your_github_username>.github.io/<your_repositories_name>`
